Personal Summary

Security Researcher at Amazon Web Services with expertise in application security and vulnerability management. Developed a scalable SBOM generator using Python and Go, significantly improving threat detection capabilities. Demonstrated success in cross-functional collaboration, leading security initiatives that effectively mitigate risks. Pending patents in open-source security highlights innovative contributions to the field.

Skills

- Python and Go development
- Application security
- Threat modeling and assessment
- Security review processes
- Cloud security expertise
- Vulnerability management
- Open-source security practices
- Cross-functional collaboration

Awards

- Pending patents
- 50+ CVEs
- First place Cloud Village CTF @ BSidesSF 2024
- Second place Cloud Village CTF @ BSidesSF 2025
- First place Cloud Village CTF @ RSA Conference 2024
- Second place Cloud Village CTF @ RSA Conference 2025
- DoD Researcher of the month

Experience

Senior Security Researcher | Amazon Web Services (AWS) - Dallas, TX | 08/2022 - Current

- Strengthened open-source software supply chain security through enhancements to Amazon Inspector and AWS vulnerability management tools.
- Led vulnerability research initiatives, discovering and mitigating software security flaws.
- Designed and implemented scalable SBOM generator and scanner to identify vulnerable components across ecosystems.
- Developed and integrated security tools and proof-of-concept applications into AWS services, enhancing threat detection and response capabilities.
- Collaborated with internal and external security researchers to address emerging threats and remediate supply chain vulnerabilities.
- Built automated system to detect and flag malicious open-source software libraries. Over 36,000 NPM malicious packages were reported. Contributed ~80% total NPM MAL-IDs to Open Source Security Foundation (OpenSSF) as of 09/2026.

Application Security Engineer | Amazon Web Services (AWS) - Dallas, TX | 06/2020 - 08/2022

- Led AWS Bug Bounty triage and validated mitigation strategies for identified vulnerabilities.
- Prioritized security issues from Security Due Diligence and Application Security Reviews.
- Provided guidance on risk assessments, incident triage, and vulnerability mitigation tactics.
- Defined security requirements to enhance engineering team protocols.

Senior Penetration Testing Consultant | Protiviti - Dallas, TX | 02/2020 - 06/2020

- Assessed clients' network security posture using manual techniques and automated tools to identify and verify common security vulnerabilities.
- Report vulnerabilities and standard remediation activities, to include clear demonstration of risk to clients.
- Conveyed complex technical security concepts to technical and non-technical audiences including executives.
- Delivered projects using well-defined methodology across various security assessment disciplines: Red Team/Purple Team Engagements, PenTests, Network Vulnerabilities Assessments, Social Engineering, IoT Hacking, Web and mobile app testing.

Penetration Tester | Express Scripts - Saint Louis, MO | 05/2018 - 01/2020

- Executed internal and external penetration tests against corporate cloud applications, web applications, APIs, networks, Windows and Unix variants to discover vulnerabilities.
- Performed mobile application penetration tests for both Android and iOS based devices.
- Created comprehensive and accurate penetration testing reports with recommendations for appropriate remediation.
- Developed scripts, tools, and methodologies to enhance Express Scripts penetration testing processes.

Certifications

- OSCP, OSCE, OSWE, GPEN

Education

Southern Methodist University | Dallas, TX | 05/2019

Bachelor of Science: Computer Science
